

Financial analysis and reporting automation

Empower your team, speed financial reporting and reduce costs by automating analysis and analytics currently stranded in spreadsheets

Unchain enterprise data

Access native enterprise data without transformation, increasing agility to leverage new information sources and reducing the cost and errors of ETL.

Increase collaboration and traceability

Move calculations, analysis and analytic models to your internal cloud, increasing cross-team collaboration and transparency into data lineage and change control.

Reduce costs through automation

Automate redundant analysis, calculations and testing, allowing data analysts and quants to focus on higher-value work.

Deploy real-time intelligent services

Instantly deploy real-time APIs that can integrate with production applications and workflows, without recoding.

Centralize financial models to improve collaboration and reduce manual and redundant data preparation for financial reporting cycles. Allow business teams to create more detailed and accurate forecasts using external data sources and machine learning models, without coding.

Modelshop - Automate Analysis Trapped in Spreadsheets

Putting data to work

Modelshop is a platform that automates financial calculations and analytics currently trapped in spreadsheets and ad-hoc analytic tools.

By moving desktop bound analytics into an online automation platform, organizations can increase collaboration, reduce model risk and rapidly deliver real-time analytic applications.

While other vendors have targeted displacing enterprise spreadsheets, Modelshop is the first technology that can credibly deliver a self-serve replacement for creating advanced multi-dimensional financial models without coding.

Connected

Self-serve data connectors, statistical exploration and data cleansing rules accelerate access to enterprise data sources

Collaborative

Online sharing, security and integrated change control makes it easier to work on models together as team while maintaining integrity

Intelligent

Create new calculations, business rules, predictive analytics and projections without advanced coding skills

Accurate

Develop simulations scenarios using multi-variate assumptions and statistical variation to ensure the integrity of analytic models

Automated

Automate redundant analyst work and deploy projection models as shareable online applications accessible through APIs

Modelshop can help customers quickly create automation models based on existing spreadsheets or custom code. Contact us for a live demo or visit www.modelshop.com to create a trial account.
